

Dragonfly Retro Dash Panel

1. Remove existing radio unit from fairing (along with internal mount points if applicable)
2. Position panel on dash and scribe line where inner fairing will have to be cut to accommodate new radio
3. Peel off liner of double sided tape on Panel.
4. Carefully position panel and press firmly to inner fairing. Ensure that entire panel is attached securely.
5. Utilizing new radio as template mark holes to be drilled.
6. Utilizing a sharp drill bit drill mounting holes. Drill using slow and steady pressure to ensure that panel does not crack or chip.
7. Mount radio using supplied hardware.
8. Wire radio into existing wiring following radio manufacturer's instructions.
